

(LAL) ATOM BOMB SITE, Nev., April 23-FIRST MINUTE OF AN ATOM BLAST-These pictures show the development of the blast fireball during the first 60 seconds of yesterday's spectacular atomic test. Top, the bomb explodes with the flash of a super-sun that made daylight seem dark by comparison. At left are trails of rockets which were set off just before the explosion. Seconds later, below, the fireball billows out in mass of white flame. (APWirephoto)(JFM-G-4400-tms) 1952
